our website.

Stairs

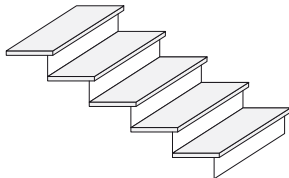

Stairs are more than a way of accessing upper floors: they are a design element that is rich in detail and has a great deal of influence on the ambiance of a living space. In addition to stair architecture and structure, cladding is also a crucial factor. Swiss-made stair solutions have a decisive advantage: parquet floor and stairs can have the same colour and surface treatment, as well as the same level of gloss.

Design possibilities

There are various possible design options and variants for your parquet staircase, depending on the layout of the room and living arrangements.

Anti-slip strips

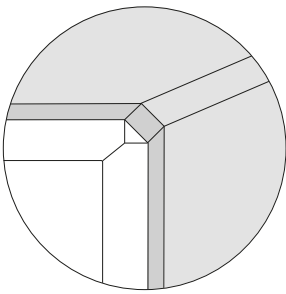

On request, Bauwerk Parkett manufactures stair treads with nonslip profiles. Non-slip profiles provide slip resistance and therefore safety, visually marking the edge of the steps at the same time. They can be made out of various materials and in different colours.

Innovative folding technology

All stair solutions are handcrafted in St. Margrethen, Switzerland. The folding technique developed by Bauwerk Parkett enables stair edges to be manufactured without visible joints – and without compromising the surface. The result is a harmonious, premium-quality transition with identical surface treatment and optimal edge protection – perfectly matching the parquet flooring in the room

This creates significant advantages:

- Consistency in colour, gloss level and surface treatment
- No accumulation of dirt thanks to an edge guard
- Seamless transition between the steps

Feature strips

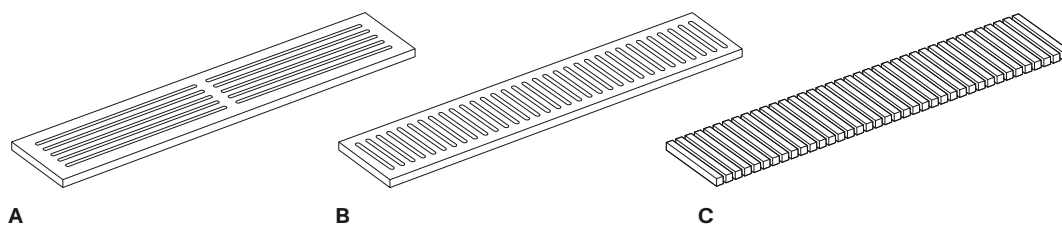

Feature strips are thin wooden strips or inserts that introduce decorative accents and structure the design of the parquet in a subtle way. Custom-built and perfectly matched to your parquet surface, they make it possible to intentionally emphasise room axes, transitions or various laying patterns.

Ventilation grids

Ventilation grids are often a functional necessity – and one with high design ambitions. When made from a different material, they disrupt the floor's seamless appearance. Bauwerk Parkett offers a solution that combines function and aesthetics: ventilation grids crafted from the same wood as your parquet, custom-made and perfectly matched in colour tone, structure, and surface finish.

Ventilation grids play an essential role in air circulation, for example, in combination with controlled domestic ventilation systems or when using trench heating. A well-considered design not only ensures technical efficiency but also supports the overall architectural concept.

Skirtings

Add the perfect final touch to your interior design with Bauwerk Parkett's extensive range of skirting, creating neat transitions to walls and covering the joints between the floor and the walls. There are skirtings for all types of wood, in various shapes and surfaces. They protect the walls and provide a discreet way to lay cables and wires.

Same wood type and colour

Bauwerk Parkett skirtings are available to match all wood types, in a variety of shapes and surface finishes.

A refined transition from floor to wall

The skirtings ensure a clean transition to the wall and effectively cover expansion joints between the floor and the wall.

A living space is only ever complete once even its finest details blend together in a balanced way. Bauwerk Parkett offers not only top-quality floors, but also extensive options for harmonious interior design: custom stair steps, elegant skirtings and discreetly integrated ventilation grids.

TASTEFUL INTEGRATION

Today, stairs are more than just a way to connect two different levels: they have become a central design element that influences the entire interior design concept.

CUSTOM STAIRS

There are a large variety of stair layouts that can significantly influence the architectural style:
from straight stairs to spiral, combined with parquet stair steps.
The result is custom solutions, perfectly tailored to your preferences.

Spiral staircase

The building's interior spaces combine natural materials with a modern, balanced aesthetic. Bauwerk Parkett's one-strip planks are not just installed in the classic way on the floor, but also on the high ceilings, creating an extraordinary, unconventional and beautiful room experience.

The cooking/dining area sits in the centre of this single-family home, connected via an open staircase to the living room above it. Design-wise, various living scenarios were accommodated using uniform, dark-coloured parquet and perfectly matching stair steps.

The staircase with its visible side face blends harmoniously with the entrance area, offering ample storage space under it. With Bauwerk Parkett's innovative production technology, it was possible to fold the stair nosing without damaging the surface. This not only resulted in seamless transitions for the stair steps, but also ensured that the edge protection was not compromised.

Functional, elegant and well-designed: custom stair steps by Bauwerk Parkett create balanced transitions and impress with their technical precision.

INNOVATIVE PRODUCTION TECHNIQUE

All stair solutions are manufactured at our competence centre in St. Margrethen, Switzerland. An innovative, unique production technique allows the stair edge to be folded without damaging the surface.

DISCREET FITTING

In most cases, ventilation grids are purely functional elements. Bauwerk Parkett offers a solution for these that brings together both function and form: ventilation grids custom-made from the same wood as your parquet, perfectly matching its colour, structure and surface. This way, construction necessities become distinctive design elements.

SUBTLE ACCENT

Feature strips can be used to visually divide or frame various laying patterns, including parallel, herringbone and cube patterns. They signal transitions between the different zones of a space, or emphasise architectural lines.

Bauwerk Parkett – Built for a lifetime

What began in 1935 with the invention of solid parquet by Swiss pioneer Ernst Göhner, sets new standards for ambitious design and healthy living today. Just like every tree and every piece of wood, each of our responsibly manufactured planks is sustainable and unique. A fusion of Swiss engineering and authentic nature results in extraordinary living experiences: today, and for future generations. bauwerk-parkett.com
